1. Simple Database querying

```sql
select
    usr.id as ID,
    usr.user_name as UserName,
    (
    select
        user_name
    from
        `user`
    where
        id = usr.parent) as ParentUserName
from
    `user` usr;
```

user 1 ⊠

select usr.id as ID, usr.user_name as UserName, (selec

ID	UserName	ParentUserName
1	1 Ali	Budi
2	2 Budi	[NULL]
3	3 Cecep	Ali

2. On code
3. Refactor

```go
func findFirstStringInBrackets(s string) string {
    i := strings.IndexByte(s, '(')
    if i < 0 {
        return ""
    }

    i++
    j := strings.IndexByte(s[i:], ')')
    if j < 0 {
        return ""
    }
    return s[i : i+j]
}
```

4. On code
